Welcome to White House Watch. Let's dive into:

- Trump's financial disclosures
- The future of North American trade
- Kevin Warsh's views on Fed independence

Donald Trump's financial disclosures were released earlier this week, revealing that the president made [more than \\$1.16bn in crypto sales and memecoin royalties](#) last year, alongside broader earnings in interests as diverse as golf courses, Bibles and perfumes.

The form also revealed [thousands of US stock transactions](#) and dozens of fees related to American and foreign-based entities bearing his name, report the FT's Alex Rogers, Ian Hodgson, George Steer and Eva Xiao.

World Liberty Financial — the crypto group founded in 2024 by the president's sons Eric Trump and Donald Trump Jr and the sons of US special envoy Steve Witkoff — has emerged as [one of Trump's biggest sources of income](#).

Among the crypto haul was \$526.8mn made from selling tokens from World Liberty Financial, and disclosed income of \$635mn in royalties from a licence agreement with “Celebration Coins”.

Trump still holds 15.75bn World Liberty Financial tokens, which are worth about \$900mn despite a steep decline over the past year, the disclosures show, along with large amounts of other cryptocurrency.

The forms reveal he made more than \$33mn of the proceeds from the World Liberty Financial sales in bitcoin and more than \$150mn via the Ethereum blockchain.

The annual disclosure, required by law and released by the Office of Government Ethics, shows that the president made money from crypto after campaigning to make America “the bitcoin superpower of the world” as part of his presidential bid in 2024.

On Wednesday, Trump told reporters that “big institutions” managed his investments, adding: “I don't talk to them”.

“I'm profiting because the stock market is going up, everybody's profiting,” Trump said.

In response to the new disclosures, White House spokesperson Anna Kelly said: “Neither the president nor his family has ever engaged — or will ever engage — in conflicts of interest.”

What we're hearing

US trade officials made an expected announcement that they [will not renew the blockbuster 2020 trade deal](#) with Mexico and Canada.

Even without a renewal, the US-Mexico-Canada Agreement (USMCA) will remain as it is for another decade. The decision to continue talks just buys more time for negotiators to iron out their disagreements.

There is no doubt that the move, which affects the future terms and conditions of more than \$1.5tn of trade across the continent, creates more uncertainty for investors.

And it comes as voters, businesses and trade unions all disagree over their vision for US trade.

A survey of voters by Public Opinion Strategies, on behalf of the trade group Global Business Alliance, found that 72 per cent of respondents backed the deal, including two-thirds of Republicans and three-quarters of Democrats.

The majority of voters also agreed that the deal, which covers almost all trade between the US and two of its top three largest trading partners, helped create US jobs and lower prices for American consumers.

Meanwhile, American unions have complained that the current trade deal needs to be renegotiated to better protect US workers.

The powerful United Auto Workers and United Steelworkers unions have said that the agreement needs to include stronger protections for workers in all three countries and better incentives for companies to create US jobs, rather than offshoring manufacturing to Mexico.

“There is no way back to the American dream without undoing the damage of Nafta (the North American Free Trade Agreement) and its successor, the USMCA,” said UAW president Shawn Fain. “There is no future for the US working class that doesn't address the free trade disaster.”

When it comes to the fragility of the world's economic resilience, are we [invulnerable or just plain lucky](#), asks Martin Wolf.
